Cattleya GAIL ANN

(*C. Pavlova* var. *Ballerina* x *C. Estelle*
alba)

This GAIL ANN was flowered by one of our customers who, incidentally, took this picture.

This first bloom of one of our GAIL ANNS is 6 by 7 inches, the petals $2\frac{1}{4}$ inches wide, and the sepals $1\frac{1}{8}$. The dorsal sepal is upright in the same plane as the lower sepals. The plant bloomed in February with flowers of very good texture.

GAIL ANN is an upright, vigorous grower.

Unflowered Seedlings

3" Pot.....\$5.00

WE have only a few hundred 3" GAIL ANNS available now, but will have 4" next year.
